Abstract: Chapter 15: Illustrated list of the Lepidoptera recorded in the Philippines, [in] Koçak,A.Ö. & M.Kemal, Results of the International Projects of the CESA on the Lepidoptera of the World- I. *Cent. ent. Stud., Memoirs* 3-4: 1849-1917,Pls.

This chapters deals with the synonymous list of the Lepidoptera of the Philippines at species and subspecies level. Totally, 4244 species group taxa are given alphabetically under the related families with their synonyms.

²² Results of the Projects of the CESA-I, Lepidoptera of Turkey (LPH).

In the Philippine Islands, Lepidoptera species and subspecies have never been published so far in the checklist form. In the present report, about 900 butterfly species and 1500 moth species are given. Together with their subspecies, these numbers increase to about 1650, and 2590, respectively. This result is temporary, it is, however, important from taxonomical and faunistical standpoints, as it is the unique publication on this subject so far.

Abstract: Chapter 16: Lepidoptera fauna of Eretna Sultanate in Asia Minor (LER) [in] Koçak, A.Ö. & M. Kemal, Results of the Historical International Projects of the CESA on the Lepidoptera of the World- I. *Cent. ent. Stud., Memoirs* 3-4: 1918-1989, map, Pl.49.

In this study totally 4067 species group taxa are listed alphabetically under the related families in the territories of the historical Eretna Sultanate in Asia Minor Peninsula.

Lepidoptera Fauna of Eretna Sultanate in Asia Minor

The Sultanate was established around 1327²³ by Eretna, an officer of Uighur (Uyghur), who succeeded the Mongol Timur-Tash as the Ilkhanid representative in Rum, and then declared himself sultan. Eretna then became governor of Anatolia under the suzerainty of Hasan the Elder, ruler of Azerbaijan. After Hasan the Elder was defeated by Hasan the Younger, son of Demirtas, Eretna in 1337 received the protection of the Mamluk sultan of Egypt. In 1343, however, Eretna defeated Hasan the Younger and emerged as an independent ruler over territories that included Nigde, Ankara, Amasya, Tokat, Samsun, and Erzincan; he made Sivas and later Kayseri his capital. Eretna was a scholarly man and a just ruler, whose people called him Kōse Peygamber (Prophet with the Scanty Beard).

Under Eretna's successors, local rulers rebelled; the principality lost territories in the west to the Ottomans and the Karamans and in the east to the Turkmen Ak Koyunlu state. In 1380 Mehmed II, the last Eretna ruler, was killed, and Burhaneddin, a former vizier, proclaimed himself sultan over Eretna lands. Kadi Burhaneddin, the vizier of the Sultanate of Eretna in northeastern Anatolia, usurped the sultanate. He

ruled forcefully until 1381, when his territories were annexed by the Ottomans.

The Sultanate of Eretna covers nearly 20 provincial territories of the modern Republic of Turkey (Map). In the present survey, the Lepidoptera fauna of the Eretna Sultanate is determined and listed below, which is equal to the sum of the species group taxa, inhabiting in the provincial territories indicated in Map.

The north western territory is represented by generally forest steppe (Pl.49 figs.2-5). Eastern region are high land. Mountainous steppe are predominant (Pl.49 figs.6-7), while forests very scattered, usually represented by various Quercus species. In the north eastern territory is represented by high grass-land over the forest line, and also by euxine forests.
